

Task

Implement `isLeapYear` function `isLeapYear()`. Leap year occurs every four years (those divisible by four) except for century years, but not when the year is divisible by 400.

Example

```
console.log(isLeapYear("2020")); // true
console.log(isLeapYear("2018")); // false
console.log(isLeapYear("1700")); // false
console.log(isLeapYear("1600")); // true
```

Gotchas

- account for all edge cases
