Task

Implement a function which transposes a matrix array - `transposeMatrix()`. Explanation

Example

```
console.log(trasposeArray([
    [1,2,3],
    [1,2,3],
    [1,2,3],
]) // [[1,1,1],[2,2,2],[3,3,3]]
```

Gotchas

- write a function yourself and use only `array.reduce()` from all array methods
